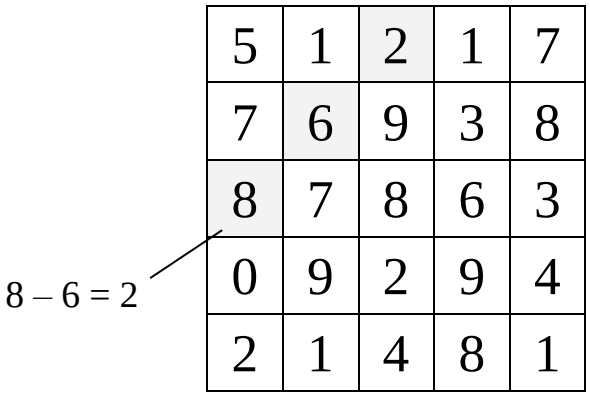
Let's look at an example of MaquaG 5 Plumi where plus and minus operators are used.

MaquaG 5 Plumi

To solve the puzzle, you have to find at least the minimum number of equations using plus or minus operators i.e. in the example minimum 9 equations. The puzzle is solved when you have circled minimum 9 results.
Note, that not all numbers represent an equation.



5	1	2	1	7
7	6	9	3	8
8	7	8	6	3
0	9	2	9	4
2	1	4	8	1

Min. 9. Equations

The solution to the puzzle is:

5	1	2	1	7
7	6	9	3	8
8	7	8	6	3
0	9	2	9	4
2	1	4	8	1

The supporting equations, which are normally not provided, are:

8-6 = 2
20 = 8+7+5
-2-1-4+8 = 1
29+8 = 37
5+12 = 17
8 = 3+4+1
16 = 7+9
8 = 9-1
4 = 3 + 8 - 7
